

## Report On Environment Education

School realises its social responsibility to conserve environment for healthy living. Therefore various recommended practices are observed regularly to promote conservation of environment, minimize pollution and reduce carbon footprints. As a first step school has successfully and effectively installed rainwater harvesting system. Harvested water helps in recharging ground water. Waste management and segregation is practised following the required steps. Wet waste and dry waste are collected in different containers. Proper arrangement has been made for the regular collection and disposal of the same.

School makes an effort to reduce the consumption of energy both by using energy efficient appliances as well as by reducing its use. Solar panels have been installed. School also educates the students and staff not to waste energy and water in any case.

With the aim of developing green and clean environment, trees are planted in and around the campus. Hundred saplings were brought from the govt. nursery in Urlana. Environment week was also celebrated. As a part of it the students adopted various plants/trees and renamed them after the names of martyrs. They are showing enthusiasm and interest in looking after them.

Environment education is imparted to enhance environmental awareness and understanding among the students.

Visits to zoo, parks are regularly organized to provide opportunities to the students to explore environmental issues, engage in problem solving and take action to improve the environment.

Moreover, in school assemblies topics are picked up with moral lessons aiming to help students develop skills to make informed and responsible decisions related to environmental issues.
